

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings of claims in the application.

LISTING OF CLAIMS:

1. (Currently Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a browser of a client computer system, comprising:
 - receiving, at an auxiliary server, a request from client browser for a main program; and
 - delivering the main program to the requesting client browser, the main program being configured to receive seller specific information, and to load and activate one or more modules including a picture displaying module for displaying selectable images, the picture displaying module being configured to obtain a set of [[pictures]]selectable images of the selected seller's auction items, based on the received seller specific information, to moveably display, on the client browser, a set of [[pictures]]selectable images, showing the selected seller's auction items, and to receive a user selection of a [[picture]]selectable image being displayed and to redirect the client browser to an auction item document at an auction site associated with the selected image; and
 - sending the set of selectable images, based on the received seller specific information, to the browser.
2. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1, wherein the step of receiving a request from a client browser for a main program includes receiving the request from an auction item document obtained from an auction site.
3. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1, wherein the set of pictures is displayed on the auction item document obtained from the auction site.
4. (Previously presented) A method of delivering, in the form of selectable images, a plurality

of auction items of a selected seller to a client browser as recited in claim 1,
wherein the picture displaying module is configured to moveably display the set of
pictures at a controllable speed; and
wherein the controllable speed is controlled by a current position of a pointing device
connected to the client computer system.

5. (Original) A method of delivering, in the form of selectable images, a plurality of auction
items of a selected seller to a client browser as recited in claim 1,
wherein the client computer system includes a display output device and the client
browser occupies a graphical window on display output device; and
wherein the picture displaying module is configured to moveably display the set of
pictures horizontally in the client browser graphical window.

6. (Original) A method of delivering, in the form of selectable images, a plurality of auction
items of a selected seller to a client browser as recited in claim 1, wherein the main program is
configured to load and activate a categories module that maintains a set of categories available
on the auction site from the specified seller.

7. (Original) A method of delivering, in the form of selectable images, a plurality of auction
items of a selected seller to a client browser as recited in claim 6, wherein the set of categories
available on the auction site from the specified seller is stored on the auxiliary server.

8. (Previously presented) A method of delivering, in the form of selectable images, a plurality
of auction items of a selected seller to a client browser as recited in claim 6, wherein the main
program is configured to load and activate an item links module that maintains a set of item
links for each category in the set of categories available on the auction site from the specified
seller.

9. (Original) A method of delivering, in the form of selectable images, a plurality of auction
items of a selected seller to a client browser as recited in claim 8, wherein the set of item links
available on the auction site from the specified seller is stored on the auxiliary server.

1 10. (Original) A method of delivering, in the form of selectable images, a plurality of auction
2 items of a selected seller to a client browser as recited in claim 9, wherein the set of item links
3 includes an item name associated with each item link.
